serry-singh
Chandigarh, India

SUMMARY

DevOps Engineer with **3+ years of hands-on experience** in designing, deploying, and managing cloud infrastructure and production applications. Proficient in AWS, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Linux, Nginx, and CI/CD automation. Experienced in deploying microservices-based applications, configuring scalable and highly available AWS environments, database infrastructure, monitoring, backups, and security. Strong hands-on experience with EC2, RDS, S3, ALB, Auto Scaling, Cloudflare, Redis, PostgreSQL, and Docker-based deployments.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate
Click here - Show Credentials
Issued: Aug 2025 | Expires: Aug 2028

EDUCATION

Chandigarh University

Master of Computer Applications | 7.2 CGPA
Distance | Aug 2023 - June 2025

PGGC-11, Panjab University

Bachelor of Computer Applications | 7.6 CGPA
2020 – 2023

PSEB Board

Higher Secondary Certificate Examination (89.1%)
2019 – 2020

Senior Secondary Certificate Examination (78.46%)
2017 – 2018

SKILLS

- **Operating Systems**: Ubuntu, CentOS
- **Cloud Platforms**: AWS (EC2, S3, RDS, VPC, EBS, LB, Auto Scaling and more...), Hostinger, OVH
- **IaC Tools**: Terraform, Ansible, AWS CDK
- **CI/CD Tools**: Jenkins, GitHub Actions
- **Containers & Orchestration**: Docker, Kubernetes
- **Scripting**: Bash
- **Monitoring Tools**: Zabbix, Grafana
- **CMS & Web Apps**: WordPress, Magento, Strapi, ERPNext, Python Ai, Laravel, Php and more.
- **Web Servers**: Apache2, Nginx
- **CDN/DNS**: Cloudflare, Godaddy, Hostinger
- **Version Control:** Git, GitHub, Bitbucket
- **Collaboration & Alerts**: Slack, MS Teams

PROFESSIONAL EXPERIENCE

Devops Engineer |

Pennep, India | June 2024 - Present

- Designed, deployed, and maintained production applications and cloud infrastructure across AWS EC2, RDS, S3, VPC, ALB, Auto Scaling, and Cloudflare.
- Deployed and managed Strapi, Magento, WordPress, ERPNext, Python, and Node.js applications with Nginx, Apache, PM2, MySQL/MariaDB, and PostgreSQL.
- Built and maintained Jenkins CI/CD pipelines for automated application deployment, service management, cache clearing, and production releases.
- Designed Docker-based application environments for containerized services and microservice deployments.
- Implemented Zabbix monitoring with automated server installation, log monitoring, alerts, email/MS Teams notifications, and backup automation.
- Automated AWS infrastructure and S3 operations using Terraform, AWS CDK, Bash scripting, and Jenkins.
- Configured Cloudflare CDN, DNS, caching, SSL, and performance optimization for production applications.
- Implemented automated database and application backups to Amazon S3 with scheduled cron jobs and Bash automation.
- Improved application availability by implementing service auto-restart, health monitoring, failover, and recovery procedures.
- Configured Linux servers, Nginx reverse proxies, SSL/TLS, firewall rules, IAM permissions, and production security controls.

Junior Devops Engineer |

Techoclouds at ludhiana, India | June 2023 - June 2024

- Deployed applications on AWS EC2, S3, VPC, EBS, ECS, EKS, RDS (MySQL).
- Built CI/CD pipelines using Jenkins for React and Node.js projects.
- Automated infrastructure with Terraform and Ansible.
- Containerized applications using Docker.
- Worked on Kubernetes (K8s): Created pods, deployments, and services using YAML.
- Used kubectl for managing K8s clusters.
- Implemented monitoring and backup strategies.

Projects

1. Microservices LMS Deployment (Production)
- Deployed multiple microservices/APIs using Docker, EC2 & VPS.
- Managed PostgreSQL on AWS RDS and Redis using Docker.
- Hosted frontend on **AWS Amplify** with Jenkins CI/CD and Docker Hub image management.
- Configured Nginx, SSL, networking, and automated deployments.

2. EC2 Auto Scaling Deployment with GitHub Actions
- Deployed a Node.js app on EC2 using Amazon Linux 2.
- Configured SSH access and cloned code from GitHub via SSH keys.
- Created a custom AMI and attached IAM roles with proper permissions.
- Enabled **SSM** for secure EC2 management without SSH.
- Set up Launch Template and **Auto Scaling Group (ASG)** for scalability.
- Integrated **GitHub Actions** using GitHub Secrets for automated deployment.

3. Coolify Self-Hosted PaaS Deployment
- Deployed and managed Coolify self-hosted PaaS platform on VPS infrastructure.
- Hosted frontend and backend applications with automated deployment workflows.
- Configured PostgreSQL and MySQL databases with backup automation.
- Managed SSL, domain routing, Docker services, and monitoring setup.

4. Production Node.js Application Deployment
- Deployed Node.js production applications on AWS EC2 and VPS environments.
- Configured Nginx reverse proxy, PM2 process manager, MySQL database, SSL, and monitoring.
- Implemented backup automation and production server optimization.

5. Zabbix Monitoring Tool Deployment
- Automated full Zabbix setup using Bash scripts on Ubuntu.
- Configured logs, alerts, **email, MS Teams notifications**.
- Created **cron-based** daily backup system to AWS S3.

6. **Strapi CMS on VPS**
- Deployed Strapi with npm, **pm2, MariaDB**, and Nginx.
- Set up SSL, reverse proxy, and **automated S3 backups**.

7.. **Magento CMS on AWS EC2**
- Full Magento deployment with Apache2, Nginx, MySQL/MariaDB.
- Used Auto Scaling and **Cloudflare CDN** for performance.
- Built Jenkins pipeline for code push, cache clear, and service restart.

8. **Laravel CI/CD on AWS EC2**
- Deployed Laravel app with web server + DB setup.
- CI/CD with Jenkinsfile and Slack build status integration.

9. **WordPress Deployment & Migration**
- Migrated WordPress websites with web server and DB reconfiguration.
- Ensured performance tuning, backup, and security.

10. **ERPNext Setup & Customization**
- Installed ERPNext with multitenancy support.
- Integrated **LMS, HRMS, payment apps**; backup script for S3 automation.
